

Kellermann product innovations 2024: i.NEX, Dash and Jetstream® CL

As a renowned manufacturer of high-quality motorcycle accessories, we are proud to present our latest innovations for the 2024 season. With the i.NEX, Dash and Jetstream® CL, we offer an impressive range of products that are revolutionizing motorcycle lighting.

Motorcycle Products

Made in Germany®

i.NEX - The electronic universal solution makes the conversion of motorcycle lights as easy as possible!

The Kellermann **i.NEX** finally takes the horror out of converting motorcycle lights. No more despair for the mechanic or incalculable hours of work in the workshop! From classic bikes to new models: The Kellermann **i.NEX** is the system solution for every motorcycle when it comes to installing indicators, rear/brake lights and position lights. With the **i.NEX**, Kellermann is once again making development history and offering a unique product.

Up to four indicators, rear light, brake light and position light can be connected directly to the **i.NEX**. The required requirements are then easily set on the **i.NEX** using rotary switches. No matter which light, no matter which motorcycle - only the Kellermann **i.NEX** can do it!

i.NEX at a glance:

- Correct flashing frequency
- No error messages in the cockpit
- No disruptive quiescent currents
- Installation of indicators with higher power consumption [watts] than original
- Installation of indicators with higher voltage [Volt] than original
- Installation on motorcycles with minus-switched indicators

Dash - Extremely bright dash indicators for Harley-Davidson!

With the new **Dash** series, Kellermann now offers dashboard indicators in a class of their own. For the first time, the legendary indicators from Kellermann are available in a compact and precisely fitting form for mounting under the handlebars. The Kellermann **Dash** series is available in two versions, **Dash A Dark** and **Dash M Dark**.

Inconspicuous at rest, unbeatable in action: With brilliant luminosity and minimalist aesthetics, the **Dash** indicators set new standards for visibility and safety on the road.

Jetstream® CL - Cruising Light - now for everyone!!

The **Jetstream® CL** is the first accessory blinker with Cruising Light function on the market. With the Cruising Light function, the indicators light up permanently as a position light with amber light, and when the blinker is activated, it then takes over the flashing function with sequential lighting effect. Two position lights illuminated in parallel visually widen the silhouette of the vehicle, which is particularly helpful when looking out for oncoming traffic.

The new **Jetstream® CL** enables the retrofitting of an amber cruising light and flashing function with running light effect for all motorcycles. Standard Cruising Light with flashing function can be converted to the Kellermann **Jetstream® CL**.
